VITA 62 High Reliability

SOSA compatible

PCI\_800.107.HR

## Key Features:

- 12V-40V wide Continuous Input Voltage
- 2300V Isolation Between Input /Output
- Active Transzorp TVS based Input EMI Filtering
- Extensive input recovery feature
- Designed to meet ISO 7637-2 and ISO 10605 protection
- Extensive upgraded burn-in testing procedures
- Transient look ahead/cut-off technology
- 6 Voltage Rails, each rail internally ISO 7637-2 secured
- Isolated 3.3V aux standby feature
- NO derating at 500W, up to 85 deg. C at the rail
- 93% Typical Efficiency
- -40°C to 85°C Rail Operating Temperature
- VITA 62 3U Form Factor, VITA 46.11 ready
- Patent pending Four Rail thermal interface
- [SMART.PSU] Technology

## HIGH REALIBILITY VITA 62 3U ISOLATED 500W 28VDC POWER SUPPLY

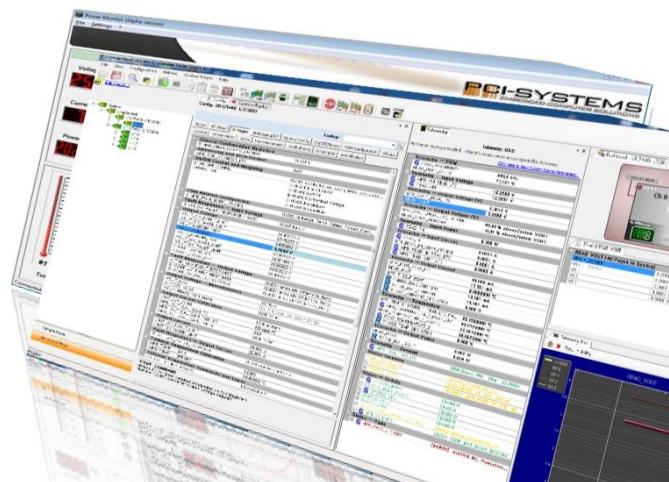

This 3U power supply works with **12VDC to 40 VDC (28VDC nominal)** input voltage and isolates the input voltage ground from the output voltage ground. The power supply is **conduction cooled**, uses **polyphase** technology on all voltage rails and can provide up to **500 watts**. It is suitable for use in **mission critical rugged applications**.

The 800. 107.HR series are designed to protect sensitive internal circuits against surges defined in ISO 7637-2 and against electrostatic discharges according to ISO 10605.

[SMART.PSU]PCI-Systems Inc. intelligent power supplies integrate a **microcontroller** (MCU) for a fully programmable and flexible solution. Intelligent power conversion allows **configuration and reconfiguration** for different applications. With intelligent power conversion, the power supply becomes a platform solution for Vita 46.11 system management-based systems. The power supply can easily be **reprogrammed** to support **SOSA** voltage rails and different **operating limits and control inputs**.

### Features:

- Parallel operating with multiple power supplies, all rails
- Load sharing and balancing
- Digital On/Off control for low standby power
- Input / Output Voltage rail setting /adjustment
- Spread Spectrum Clocking of power supply stages
- Power supply sequencing and hot-swap control
- Power supply history logging and fault management
- Monitoring all input/output voltages, currents and power
- Current fold back control
- Automatic temperature drift compensation for all outputs
- Total-Elapsed-Time Recorder
- Efficiency calculations at any time
- Communication via SMB/I2C (PMB)for Vita 46.11 system man
- Collects data from temperature sensors for over temperature
